## HANGING FROM CEILING

---

- Mount 4 hooks (not included) into your ceiling, matching the distance between the screw holes in each corner of the rack. Please note that different ceiling materials require different types of rawlplugs and screws, if you are uncertain of which type to use, ask in your local hardware store.
- Pick the length of the hangers you wish to use (short, long or a combination of a short and a long for extra extension) and hang them on the hooks in your ceiling. Attach the rack to the ends of the hangers in each corner.

Maximum weight hanging from the rack will depend on the fixture and ceiling material. If you are unsure of the maximum weight ask an expert for advice.

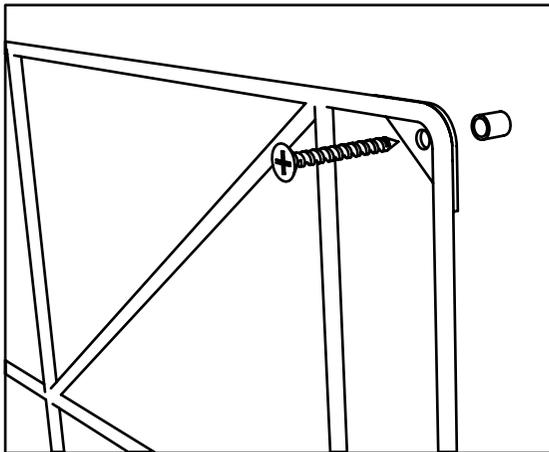

Ferm LIVING shall not be responsible for any damages caused by improper installation.

---

## HANGING ON WALL

---

- Mark 4 spots on your wall, matching the distance between the screw holes in each corner of the rack. Drill the holes and insert rawlplugs.
- Please note that different wall materials require different types of rawlplugs and screws. Therefore the screws attached to the product might not be the right ones for your wall. If you are uncertain of which type to use, ask in your local hardware store.
- In each corner, place an extender between the wall and the rack, and drive the screw through the screw hole of the rack into the wall via the extender. Make sure the screw is tightened.

Maximum weight hanging from the rack will depend on the fixture and wall material. If you are unsure of the maximum weight ask an expert for advice.

Ferm LIVING shall not be responsible for any damages caused by improper installation.
